Notification of Reason for Refusal

Patent Application Number: Patent Application No.2003-074072

Drafting Date: June 27, 2006

Examiner of JPO: IZUMI, Takuya 2908 2C00

Representative/Applicant: Mr. OKAMOTO, Hiroyuki (and other 1)

Applied Provision: Patent Law Section 29(2)

<<<<Final>>>>

This application should be refused for the reason mentioned below. If the applicant has any argument against the reason, such argument should be submitted within 60 days from the date on which this notification was dispatched.

Reasons

The inventions in the claims listed below of the subject application should not be granted a patent under the provision of Patent Law Section 29(2), since the inventions could have easily been made by persons who have common knowledge in the technical field to which the inventions pertain, on the basis of the inventions described in the publications listed below which were distributed in Japan or foreign countries prior to the filing of the subject application, or available to the public through electric communicating circuits.

Note (With respect to cited documents, refer to the list of the cited documents.)

Claims 1 to 12

Cited documents 1 to 10

Remark:

It is described in the cited documents 1 to 4 to provide a transferring belt for transferring a developer carried by each of the image carriers to a medium to be transferred, and a switching member which supports the transferring belt and turns around a hinge in opening and closing manners with respect to an image forming device element, and to form an opening port wherein, when the switching member closes, the transferring belt contacts each of the image carriers, and when the switching member moves from closing to opening, the transferring belt moves together with the switching member, whereby the opening port exposes each of developing parts and each of the image carriers in their leaving directions.

The cited documents 7 and 8 describe that the developing part and the image carrier are detachably independent, and one of them is detachable with respect to the image forming device element, regardless of whether or not other attaches to the image forming device element. The cited document 10 describes the positioning member being at the innermost place of a guide part and composed of an urging means for positioning the image carrier.
